Math Answers Decimals

A wonderful strategy for placing the decimal is to use estimation. For example if the question is $49.2 + 20.1$, the answer without the decimal is 693. Estimate by rounding 49.2 to 50 and 20.1 to 20. $50 + 20 = 70$. The decimal in 693 must be placed between the 9 and the 3 as in 69.3 to make the number close to the estimate of 70.

Basic Operations with Decimals Level 2. This art worksheet reviews the basic operations (add, subtract, multiply, and divide) with decimals. Student misunderstanding: Multiplying: the total number of digits to the right of the decimal should be the same in the final answer. Dividing: cannot have a decimal in the divisor (outside number). Whatever you do to the outside you have to do to the inside.

Worksheets on Decimals by Math Crush

Have a play with decimal numbers yourself: Large and Small. So, our

Decimal System lets us write numbers as large or as small as we want, using the decimal point. Digits can be placed to the left or right of a decimal point, to show values greater than one or less than one. The decimal point is the most important part of a Decimal Number. Without it we are lost, and don't know what each position means.
