Cellular Automata Applications and Acceleration. For people with passing familiarity with the idea of cellular automata (CA), the first thing that comes to mind is probably John Horton Conway’s Game of Life. After Martin Gardner described Conway’s Game of Life (often abbreviated to Life, GOL, or similar) in his mathematical games column of Scientific American in 1970, the game developed into its own niche, attracting formal research and casual tinkering alike.

Applications of Cellular Automata There exist many possible applications of CA , such as musical composition, structural design, modeling fluid dynamics, modeling seismic wave propagation, digital mechanics, etc. Localisation of update rules for CA models allow for high parallelisation of computation, making CA simulations highly efficient (Spezzano and Talia, 1999).

Physical Applications Of Cellular Automata

A block cellular automaton or partitioning cellular automaton is a special kind of cellular automaton in which the lattice of cells is divided into non-overlapping blocks and the transition rule is applied to a whole block at a time rather than a single cell. Block cellular automata are useful for simulations of physical quantities, because it is straightforward to choose transition rules that obey physical constraints such as reversibility and conservation laws.
