Matrix polynomials as building blocks¶. We can define a function of the matrix by Taylor series: $f(A) = \sum_{k=0}^{\infty} c_k A^k$. The convergence is understood as the convergence in some matrix norm.. Example of such series is the Neumann series $(I - F)^{-1} = \sum_{k=0}^{\infty} F^k$, which is well defined for $\rho(F) < 1$.

Bruno Iannazzo discussed how to compute the Lambert W function of a matrix, which is any solution of the matrix equation $W e^{WX} = X$. The scalar Lambert W function was named and popularized in a 1996 paper by Corless, Gonnet, Hare, Jeffrey and Knuth, On the Lambert W Function; it has many applications, including in delay differential equations. Bruno finished with a striking photo of the equation written in sand.

In mathematics, a matrix (plural

matrices) is a rectangular array or table of numbers, symbols, or expressions, arranged in rows and columns. For example, the dimension of the matrix below is 2×3 (read "two by three"), because there are two rows and three columns: $\begin{bmatrix} - & - \\ - & - \end{bmatrix}$. Provided that they have the same size (each matrix has the same number of rows and the same number of columns as the ...
