Boiling point is a good guide to the strength of the intermolecular forces. If these are weak, you don't need to supply much energy to break them to produce gaseous molecules, and the boiling point is low. If they are strong, you have to supply a lot of heat energy to break them, and the boiling point is high.

THE STRENGTHS OF VAN DER WAALS DISPERSION FORCES

The ability to use representations of molecular structure to predict the macroscopic properties of a substance is central to the development of a robust understanding of chemistry. Intermolecular forces (IMFs) play an important role in this process because they provide a mechanism for how and why molecules interact.

Student Understanding of Intermolecular Forces: A ...

In the cases of NH_3 , H_2O and HF there must be some additional intermolecular forces of attraction, requiring significantly more heat energy to break. These relatively powerful intermolecular forces are described as hydrogen bonds. The origin of hydrogen bonding. The molecules which have this extra bonding are:

INTERMOLECULAR BONDING - HYDROGEN BONDS

While the intramolecular forces keep the atoms in a molecule together and are the basis for the chemical properties, the intermolecular forces are those that keep the molecules themselves together and are virtually responsible for all the physical properties of a material.

Intermolecular forces - Chemistry

Intermolecular forces are the forces that are between molecules. And so that's different from an intramolecular force, which is the force within a molecule. So a force within a molecule would be something like the covalent bond. And an intermolecular force would be the force that are between molecules. And so let's look at the first intermolecular force. It's called a dipole-dipole interaction. And let's analyze why it has that name.
