Component-based Software Engineering - Kreatx

A service is a component that is deployed independently. For example, a bank might deploy a market data service to cloud infrastructure. This service would provide stock market data to a variety of stock trading systems and applications. Services allow for extremely resilient applications. For example, if an application doesn't get a response from a service, it can try again and be directed to a completely different instance.

7 Examples of Software Components - Simpllicable

The primary objective of component-based architecture is to ensure component reusability. A component encapsulates functionality and behaviors of a software element into a reusable and self-deployable binary unit. There are many standard component frameworks such as COM/DCOM, JavaBean, EJB, CORBA, .NET, web services, and grid services.
