Basic Antenna Theory Wireless

In the field of communication systems, whenever the need for wireless communication arises, there occurs the necessity of an antenna. Antenna has

the capability of sending or receiving the electromagnetic waves for the sake of communication, where you cannot expect to lay down a wiring system. The following scenario explains this.

– The slot length is some ($\lambda/2$) for the slot antenna and ($\lambda/4$) long for the INF antenna. • The INF and the slot antennas behave similarly. • The slot antenna can be considered as a loaded version of the INF antenna. Basic Antenna Theory - Wireless

• The slot antenna can be considered as a loaded version of the INF antenna. The load is a quarter-wavelength stub, i.e. a narrowband device. • When the feed point is moved to the short-circuited end of the slot (or INF) antenna, the impedance decreases. When it is moved to the slot center (or open end of the INF antenna), the impedance increases
