The Outlander Series Bundle: Books 1, 2, 3, and 4

Outlander, Dragonfly in Amber, Voyager, Drums of Autumn *Delacorte Press*

There's never been a better time to discover the novels behind the blockbuster Starz original series Outlander. Blending rich historical fiction with riveting adventure and a truly epic love story, here are the first four books of Diana Gabaldon's New York Times bestselling saga that introduced the world to the brilliant Claire Randall and valiant Highlander Jamie Fraser: OUTLANDER DRAGONFLY IN AMBER VOYAGER DRUMS OF AUTUMN Scottish Highlands, 1945. Claire Randall, a former British combat nurse, is just back from the war and reunited with her husband on a second honeymoon when she walks through a standing stone in one of the ancient circles that dot the British Isles. Suddenly she is a Sassenach—an "outlander"—in a Scotland torn by war and raiding clans in the year of Our Lord . . . 1743. Claire is catapulted into the intrigues of a world that threatens her life, and may shatter her heart. Marooned amid danger, passion, and violence, her only chance of safety lies in Jamie Fraser, a gallant young Scots warrior. What begins in compulsion becomes urgent need, and Claire finds herself torn between two very different men, in two irreconcilable lives. Praise for Diana Gabaldon's Outlander novels "Marvelous and fantastic adventures, romance, sex . . . perfect escape reading."—San Francisco Chronicle, on Outlander "History comes deliciously alive on the page."—New York Daily News, on Outlander "Gabaldon is a born storyteller. . . . The pages practically turn themselves."—The Arizona Republic, on Dragonfly in Amber "Triumphant . . . Her use of historical detail and a truly adult love story confirm Gabaldon as a superior writer."—Publishers Weekly, on Voyager "Unforgettable characters . . . richly embroidered with historical detail."—The Cincinnati Post, on Drums of Autumn

Biological and Oceanographic Observations in the Central North Pacific July-September 1958
This report contains the biological (including fishing) and oceanographic data collected in the central North Pacific during the July-September 1958 period from the U.S. Bureau of Commercial Fisheries research vessel Hugh M. Smith and the M/V Paragon. The latter made a commercial-scale gill-net survey for albacore under a contract with the Bureau. Scientists and crew aboard the former collected oceanographic, biological, and fishing data to permit a comparison of conditions in 1958 with those of previous years. The major effort of both vessels was in the area between 155° and 175° W. longitude and from 41° to 48°N. latitude.

Heal Your Headache *Workman Publishing*
Based on the breakthrough understanding that virtually all headaches are forms of migraine--because migraine is not a specific type of headache, but the built-in mechanism that causes headaches of all kinds, along with neck stiffness, sinus congestion, dizziness, and other problems--Dr. Buchholz's Heal Your Headache puts headache sufferers back in control of their lives with a simple, transforming program: Step 1: Avoid the "Quick Fix." Too often painkillers only make matters worse because of the crippling complication known as rebound. Step 2: Reduce Your Triggers. The crux of the program: a migraine diet that eliminates the foods that push headache sufferers over the top. Step 3: Raise Your Threshold. When diet and other lifestyle changes aren't enough, preventive medication can help stay the course. That's it: in three steps turn your headache problems around.

A Problem Solving Approach for Mathematics *Springer Science & Business Media*
In the history of mathematics there are many situations in which calculations were performed incorrectly for important practical applications. Let us look at some examples, the history of computing the number π began in Egypt and Babylon about 2000 years BC, since then many mathematicians have calculated π (e. g. , Archimedes, Ptolemy, Viète, etc.). The first formula for computing decimal digits of π was discovered by J. Machin (in 1706), who was the first to correctly compute 100 digits of π . Then many people used his method, e. g. , W. Shanks calculated π with 707 digits (within 15 years), although due to mistakes only the first 527 were correct. For the next examples, we can mention the history of computing the fine-structure constant α (that was first discovered by A. Sommerfeld), and the mathematical tables, exact calculations, and formulas, published in many mathematical textbooks, were not verified rigorously [25]. These errors could have a large effect on results obtained by engineers. But sometimes, the solution of such problems required such technology that was not available at that time. In modern mathematics there exist computers that can perform various mathematical operations for which humans are incapable. Therefore the

computers can be used to verify the results obtained by humans, to discovery new results, to - computing?, we can mention that recently (in 2002) Y. Kanada, Y. Ushiro, H. Kuroda, and M. provetheresultsthat a human can obtain without any technology. With respect to our example of
