Geology Of The Central Jura

The Jura Mountains are a sub-alpine mountain range a short distance north of the Western Alps and mainly demarcate a long part of the French-Swiss border. The east of the range separates the Rhine and Rhône basins. The west solely relates to the Rhône, however on the north side drains via the river Doubs which is a sub-tributary of the Rhône, flowing about 100 kilometres east and later requiring the valley of the Saône, south to the French city of Lyon where both parts of the river ...

Jura Mountains - Wikipedia

Geology Of The Central Jura Geology. Structurally, the Jura consists of a sequence of geologic folds, the formation of which is facilitated by an evaporitic decollement layer. The box folds are still relatively young, which is evident by the general shape of the landscape showing that they have not existed long enough to experience erosion,...

...

Jura's Remarkable Geology. Excepting the low-lying areas of the east coast, which mainly consist of Scarba conglomerate and Port

Ellen phyllites, the isle of Jura is largely formed of Jura quartzite, a metamorphic rock which has its origins in the late Pre-Cambrian or Dalradian age. The predomination of quartzite is most apparent amid the Paps and the ridges in the island's north-west.

Jura's Remarkable Geology | Wild Walks on the Isle of Jura

The Swiss Alps form the central part of the entire alpine belt, which extends from Nice on the Mediterranean to Vienna. The high peaks and glaciers are characteristic of the Central Alps, which are made up of sedimentary, crystalline and metamorphic rocks (more information on these rocks and the rock cycle: [link](#)). Many of the summits are still pointed and sharp-edged as they were neither covered by ice nor eroded by it during the ice ages.

...

It probably formed by a combination of marine and cold-climate shore processes during successive glacial periods at times when the margin of the Scottish ice sheet lay to the east of Jura. The seaward edge of the High Rock Platform is cut by the backing cliff (10-15m high) of the Main Rock Platform, which forms a prominent feature along much of the coast.

West coast of Jura - Scotland - the home of geology

Alternative Title: Jura. Jura Mountains, also called Jura, system of ranges extending for 225 miles (360 km) in an arc on both sides of the Franco-Swiss border from the Rhône River to the Rhine. It lies mostly in Switzerland, but a good part of the western sector lies in France. The highest peaks of the Jura are in the south, in the Geneva area, and include Crêt de la Neige (5,636 feet [1,718 m]) and Le Reculet (5,633 feet [1,717 m]), both in France, and Mount Tendre and La Dôle, both ...

Jura Mountains | mountain range, Europe | Britannica

The Chain Jura, defined by Bertrand (1885) in the Central Jura, appears to be present along the entire concave border of the Jura facing the Alps. Its characteristic anticlinal ridges and broad synclinal valleys clearly correlate with the form of the Eastern Ranges (and the eastern part of Bas-Bugey) in the region described here.
