Reinventing Talent Management

Principles and Practices for the New World of Work *Berrett-Koehler Publishers*

In this book, preeminent organizational scholar Edward Lawler identifies a comprehensive and integrated set of talent management practices that fit today's rapidly evolving workplace. The world of work has changed dramatically, says Lawler. Organizations now operate in a global environment. New technologies continue to disrupt how, when, and where work is done and

should be managed. The workforce is becoming more diverse. Sustainability has joined profitability as a key business goal. All of this has dramatically accelerated the pace of change, making recruiting the best talent—not simply filling positions—an overriding concern. But too many organizations still use a job-based, bureaucratic talent management approach that doesn't take into account how the world has changed. Indeed, a recent study showed that from 1995 to 2016, there was no significant change in the way HR spends its time. Lawler says that talent management has to be reinvented. It needs to be closely linked to the organization's overall strategy. Recruitment and talent management should be driven by the skills and competencies the organization

needs for long-term growth. This means talent management requires agile systems that can respond quickly to changing conditions and that take a more individualized approach to evaluating and rewarding performance. And everything talent management does has to be based on evidence, not tradition. Lawler looks at attracting, selecting, developing, rewarding, managing, and organizing talent through this new lens. In today's world, organizations have to constantly reinvent themselves—and talent management must do the same.

Research Methodologies in Supply Chain Management *Springer Science & Business Media*

For research in all subjects and among

different philosophical paradigms, research methodologies form one of the key issues to rely on. This volume brings a series of papers together, which present different research methodologies as applied in supply chain management. This comprises review oriented papers that look at what kind of methodologies have been applied, as well as methodological papers discussing new developments needed to successfully conduct research in supply chain management. The third group is made up of applications of the respective methodologies, which serve as examples on how the different methodological approaches can be applied. All papers have undergone a review process to ensure their quality. Therefore, we hope that this book will

serve as a valid source for current and future researchers in the field. While the workshop on “Research Methodologies in Supply Chain Management” took place at the Supply Chain Management Center, Carl von Ossietzky University in Oldenburg, Germany, it is based on a collaboration with the Supply Chain Management Group of the Department of Operations Management at the Copenhagen Business School and the Department of Production Management at the Vienna University of Economics and Business Administration. We would like to thank all those who contributed to the workshop and this book.
