Identifying Ignitable Liquids in Fire Debris: A Guideline ...

Discovering and identifying flammable liquids after a fire is more difficult due to the effects of weathering, primarily through evaporation of volatile compounds, and biological degradation, which can alter the chemical signature of the liquids. The ignitable liquids studied, representing the many “designated classes” of the American Society for Testing and Materials (ASTM) International, ranged from gasoline to oxygenated liquids.

Identifying Ignitable Liquids in the Aftermath of a Fire ...

Finally, to demonstrate the potential of their technique, they used it to analyze a particularly complex type of sample: debris from a fire. When analyzing such debris, analytical scientists are usually searching for signs that an ignitable liquid, often gasoline, was used to start the fire, indicating arson.

Identifying Ignitable Liquids In Fire Debris A Guideline ...

Detection of fire accelerants is the process that a fire investigator uses to determine if fire accelerants were used at a fire scene. This process involves a combination of both field work and laboratory analysis by fire investigators and chemists. In order for a positive identification of a fire accelerant to occur both field work and laboratory analysis must take place. This is because when a fire accelerant is used only ignitable liquid residues remain at the scene. It is the chemist's job t
