Ophthalmic Photography: Retinal Photography, Angiography ...

The first edition of Ophthalmic Photography, published in 1997, was an ambitious undertaking that attempted to gather all aspects of retinal photography and angiography into one volume. The result was a comprehensive yet accessible book that has become a valuable reference for ophthalmic photographers worldwide.

Ophthalmic Photography: Retinal Photography, Angiography ...

Angiography of the retina of the eye requires the injection of a small amount of dye into a vein in the patient's arm. The dye travels through the blood stream and is photographed using special cameras and colors of light as it travels through the vessels of retina. Fluorescein Angiography is performed with a dye called Sodium Fluorescein. When illuminated with a blue light, the fluorescein dye glows or fluoresces in yellow-green.

Ophthalmic Photography: A Textbook of Retinal Photography, Angiography and Electronic Imaging: A Textbook of Fundus Photography, Angiography and Electronic Imaging Hardcover – 21 Nov. 1996 by Patrick J. Saine MEd CRA FOPS (Author), Marshall E. Tyler CRA FOPS (Author)

Ophthalmic Photography: A Textbook of Retinal Photography ...

Since its introduction in the early 1960's, fluorescein angiography has become an essential tool in the understanding, diagnosis and treatment of retinal disorders. This diagnostic procedure utilizes a specialized fundus camera or scanning laser ophthalmoscope to capture rapid-sequence photographs of the retina following an intravenous injection of fluorescein sodium.

Fluorescein Fundamentals - Ophthalmic Photographers' Society

A Fluorescein Angiography is a tool for examining the back of the eye. It can record where the blood vessels are in your eye, their

size and any problems affecting them. First, a vein in your arm is injected with a special dye which then travels round your body. Pictures are taken as the dye passes through the blood vessels in your eye.

Ophthalmic Photography—a Textbook of Retinal Photography ...

Indocyanine green angiography is a diagnostic procedure used to examine choroidal blood flow and associated pathology.

Indocyanine green is a water soluble cyanine dye which shows

fluorescence in near-infrared range, with peak spectral absorption of 800-810 nm in blood. The near infrared light used in ICGA penetrates ocular pigments such as melanin and xanthophyll, as well as exudates and thin layers of sub-retinal vessels. Age-related macular degeneration is the third main cause of blindness wo
