The “u” or “µ” in the name comes from the the SI prefix “micro-”. uModbus is very small and lightweight.

## uModbus · PyPI

Modbus is an application-layer protocol, independent of the data transmission medium. Data transactions are based on the master/client requesting data from or writing data to the slave/server. The data transactions are controlled by the master/client and there is no data-by-exception transmitted in standard Modbus.
