Diverticular Disease

Diverticular disease and diverticulitis are related digestive conditions that affect the large intestine (bowel). Diverticula are small bulges or pockets that can develop in the lining of the intestine as you get older. Most people with diverticula do not get any symptoms and only know they have them after having a scan for another reason.

Diverticular disease and diverticulitis - NHS

Diverticular disease and diverticulitis are related digestive conditions that affect the large intestine (colon). In diverticular disease, small bulges or pockets (diverticula) develop in the lining of the intestine. Diverticulitis is when these pockets become inflamed or infected. Symptoms of diverticular disease include: lower abdominal pain

Diverticular disease - Illnesses & conditions | NHS inform

Diverticular disease is a condition where small pouches, called diverticula, form in the lining of your bowel and push out through the bowel wall, causing symptoms. Symptoms may include, for example, pain in your tummy or a change in bowel habits. If you have diverticula that don’t cause any symptoms, this is known as diverticulosis.
