The first solution with x > 0 of the equation sin2x = −1/4 places 2x in the interval (p,3p/2), so to invert this equation using the arcsine we need to apply the identity sin(p−x) = sin x, and rewrite sin2x = −1/4 as sin(p−2x) = −1/4. The solution of this equation may then be found by taking the arcsine, and is.

In mathematics, an ordinary differential equation (ODE) is a differential equation containing one or more functions of one independent variable and the derivatives of those functions. The term ordinary is used in contrast with the term partial differential equation which may be with respect to more than one independent variable.
