Any shape of mat (raft) can be modeled in STAAD Foundation Advanced. Various methods to create mat (raft) model are explained in Quick Tour and STAAD Foundation Advanced graphical environment. Any shape of hole or control region can be added to the mat (raft boundary). STAAD Foundation Advanced follows physical modeling concept for mesh generation. By which you only have to specify the boundary for mat (raft) and program will generate plate mesh based on boundary geometry, loading, pile ...

If you are not sure what area spring constant to use, consult with a geotechnical engineer. Some engineers choose to run the analysis with a spring constant varying from 0.5 to 5-10 times the provided value and design for the worst case (see ACI 336.2R-88). In many cases, the stiffness of the mat is much larger than the soil stiffness.

Staadpro foundation is Ok types but not so much options available specially in case of Raft design(such as Variable depth Raft options).It is good only in Isolated and combined footing.Although,One additional benefit in Staad foundation is that it directly import the inputs for loads,dim. etc from Staadpro - superstructure model and hence consumes very less time in design and detailing.Still,lacks very behind from SAFE in case of Raft foundation.
