Fundamentals Of Neural Network Modeling

The term 'neural network' refers to a large class of models sharing certain architectural and processing features. Such models contain many simple processing units operating in parallel with connections whose strength or weight can be varied; they learn by adjusting their weights as they gain experience.

Network models are a theoretical tool for the investigation of the behavior of idealized neurons. If we need these models (and the editors argue we do), then we need textbooks to educate the psychiatrist about modeling (and the

editors claim they have provided us with one) and to help us see the link between models and the real world of psychopathology.
