In Mathematics, linear programming is a method of optimising operations with some constraints. The main objective of linear programming is to maximize or minimize the numerical value. It consists of linear functions which are subjected to the constraints in the form of linear equations or in the form of inequalities.. Linear programming is considered as an important technique which is used to ...

The general process for
solving linear-
programming exercises
is to graph the
inequalities (called the

"constraints") to form a
walled-off area on the
x,y-plane (called the
"feasibility region").
Then you figure out the
coordinates of the
corners of this
feasibility region (that
is, you find the
intersection points of
the various pairs of
lines), and test these
corner points in the
formula (called the
"optimization
equation") for which
you're trying to find
the highest or lowest
value.
