First Man

The Life of Neil A. Armstrong Simon and Schuster

Soon to be a major motion picture, this is the first—and only—definitive authorized account of Neil Armstrong, the man whose “one small step” changed history. When Apollo 11 touched down on the Moon’s surface in 1969, the first man on the Moon became a legend. In First Man, author James R. Hansen explores the life of Neil Armstrong. Based on over fifty hours of interviews with the intensely private Armstrong, who also gave Hansen exclusive access to private documents and family sources, this “magnificent panorama of the second half of the American twentieth century” (Publishers Weekly, starred review) is an unparalleled biography of an American icon. In this “compelling and nuanced portrait” (Chicago Tribune) filled with revelations, Hansen vividly recreates Armstrong’s career in flying, from his seventy-eight combat missions as a naval aviator flying over North Korea to his formative trans-atmospheric flights in the rocket-powered X-15 to his piloting Gemini VIII to the first-ever docking in space. For a pilot who cared more about flying to the Moon than he did about walking on it, Hansen asserts, Armstrong’s storied vocation exacted a dear personal toll, paid in kind by his wife and children. For the near-fifty years since the Moon landing, rumors have swirled around Armstrong concerning his dreams of space travel, his religious beliefs, and his private life. A penetrating exploration of American hero worship, Hansen addresses the

complex legacy of the First Man, as an astronaut and as an individual. “First Man burrows deep into Armstrong’s past and present...What emerges is an earnest and brave man” (Houston Chronicle) who will forever be known as history’s most famous space traveler.

The Book of Bok

One Moon Rock’s Journey Through Time and Space Hachette UK

First man on the Moon Neil Armstrong reveals the adventure of the first Moon landing, and how the Earth and the Moon came to be, in this unique non-fiction picture book. A young boy sits up in bed and gazes at the distant Moon through his window. He wonders if, one day, a human will stand on its surface and look back at the Earth. But Earth is already being studied from the Moon. An all-seeing Moon rock of almost impossible age, called Bok, has been looking down at our blue and green planet for millennia. Geologists - people who study rocks - have a saying: 'Rocks remember'. During his time, Bok has witnessed some truly wondrous things. Created in the Earth-shattering collision 4.5 billion years ago that led to the formation of the Moon, he has seen stars burst into being and meteors streak through the solar system. He has seen his own Moon surface be transformed with craters, and he has watched a fiery, volcanic planet transform into the haven we know today - as mountain ranges rose up, oceans appeared and dinosaurs roamed the Earth. And he found himself rudely awoken one early lunar morning by a strange creature picking him up and throwing him into a box. That is how Bok and Neil Armstrong first met, and this is their (true) story.

LIFE Neil Armstrong 1930-2012

"That's one small step for a man, one giant leap for mankind." *Life*

When the boy from Ohio was growing up he became obsessed with flight-he piloted a plane before he drove a car. He raptly followed the exploits of Chuck Yeager in the Bell X-1, and wondered if he himself might have the right stuff one day. As he saw the Mercury 7 astronauts assembled, he lamented that he had been born a generation too late for the great adventure into outer space. But Neil Armstrong's chance would come. His colleagues in the Gemini and Apollo programs wondered at his preternatural calm as he piloted through near-death experiences, and then, finally, in 1969, the Eagle landed, and Armstrong took "one small step for a man, one giant leap for mankind." He was instantly declared an American hero, but was he one? The good news, as thrillingly documented in the pages of this commemorative LIFE tribute, is that Armstrong was exemplary in many ways. From the boyhood years to the life-changing-and world-changing-accomplishment, Armstrong stayed true to his course, and did thereafter until his death in August 2012 at age 82. All of it is here: LIFE's coverage of the space race, the family photos from Ohio, the tick-tock coverage of Apollo 11, the retreat into the peace and quiet-and family life-that always mattered to Neil Armstrong. When he was younger, Armstrong gazed at the astronauts in the pages of LIFE. And now, his story is told there once more-in full.

Carrying the Fire

50th Anniversary Edition *Farrar, Straus and Giroux*

Reissued with a new preface by the author on the fiftieth anniversary of the Apollo 11 journey to the moon The years that have passed since Neil Armstrong, Buzz Aldrin, and Michael Collins piloted the Apollo 11 spacecraft to the moon in July 1969 have done nothing to alter the fundamental wonder of the event: man reaching the moon remains one of the great events—technical and spiritual—of our lifetime. In Carrying the Fire, Collins conveys, in a very personal way, the drama, beauty, and humor of that adventure. He also traces his development from his first flight experiences in the air force, through his days as a test pilot, to his Apollo 11 space walk, presenting an evocative picture of the joys of flight as well as a new perspective on time, light, and movement from someone who has seen the fragile earth from the other side of the moon.

Shoot for the Moon

The Space Race and the Extraordinary Voyage of Apollo 11 *Little, Brown*

Learn why NASA astronaut Mike Collins calls this extraordinary space race story "the best book on Apollo": this inspiring and intimate ode to ingenuity celebrates one of the most daring feats in human history. When the alarm went off forty thousand feet above the moon's surface, both astronauts looked down at the computer to see 1202 flashing on the readout. Neither of them knew what it meant, and time was running out . . . On July 20, 1969, Neil Armstrong and Buzz Aldrin became the first humans to walk on the moon. One of the world's greatest technological achievements -- and a triumph of the American spirit -- the Apollo 11 mission was a mammoth undertaking involving more than 410,000 men and women dedicated to winning the space race against the Soviets. Set amid the tensions and upheaval of the sixties and the Cold War, Shoot for the Moon is a gripping account of the dangers, the challenges, and the sheer determination that defined not only Apollo 11, but also the Mercury and Gemini missions that came before it. From the shock of Sputnik and the heart-stopping final minutes of John Glenn's Mercury flight to the deadly whirligig of Gemini 8, the doomed Apollo 1 mission, and that perilous landing on the Sea of Tranquility -- when the entire world held its breath while Armstrong and Aldrin battled computer alarms, low fuel, and other problems -- James Donovan tells the whole story. Both sweeping and intimate, Shoot for the Moon is "a powerfully written and irresistible celebration" of one of humankind's most extraordinary accomplishments (Booklist, starred review).
