Introductory Graph Theory Answer

The interconnected objects are represented by points termed as vertices, and the links that connect the vertices are called edges. Formally, a graph is a pair of sets (V, E) , where V is the set of vertices and E is the set of edges, connecting the pairs of vertices. Take a look at the following graph –.

graph having as vertices those of $V \setminus S$ and as edges those of G that are not incident to any vertex from S . In the case that $S = \emptyset$, we denote it G . Let $S \subseteq V$. The graph obtained by deleting the edges from S , denoted by $G - S$, is the graph obtained from G by removing all the edges from S . That is, $G - S = (V; E \setminus S)$. If $S = \emptyset$, we write G .

Graph theory in mathematics means the study of graphs. Graphs are one of the prime objects of study in discrete mathematics. In general, a graph is represented as a set of vertices (nodes or points) connected by edges (arcs or line). Graphs are therefore mathematical structures used to model pairwise relations between objects.
