Follicular Growth Ovulation and Fertilization: Molecular ...

Follicle growth and development are tracked during fertility treatments. During superovulation (used during IVF treatment), the goal is to stimulate the ovaries to develop several mature follicles at once. An ultrasound exam, also known as an antral follicle count (AFC), may be performed as a part of fertility testing.

Follicular Growth Ovulation And Fertilization Molecular ...

Ovulation involves a gentle extrusion of the granulosa and ovum into the periovarian space. Spermatozoa were abundant in the female reproductive tract including the periovarian space at oestrus. Spermatozoa penetrated the loosely packed theca of mature follicles and were present in CL, indicating that intrafollicular fertilization may occur. The relatively small CL formed by eversion, reaching a maximum size after implantation.

Follicular development, ovulation, fertilization ...

During the follicular phase, the antral follicles in the tertiary stage begin a process that leads to ovulation. While several follicles are stimulated, only one follicle matures into an egg. If you are on fertility drugs, several follicles may reach ovulation. Follicles are responsible for :

Ovarian And Antral Follicles: How Do They Predict Fertility?

The follicle that is able to grow the largest is the one which will be successful in ovulating. This dominant follicle is selected during the follicular phase of the thirteenth cycle. Ovulation: Just before ovulation, the mature follicle ruptures on one side. The release of pressure causes the oocyte to be ejected from the follicle and it is now called the ovum or egg.

Follicle Development, Growth & Ovulation

Ovulation and fertilization: the key stages before implantation. Ovulation usually occurs at the end of the follicular phase, around day 14. The Graafian follicle bursts and releases the ovum after maximum secretion of luteinizing hormone (LH). This reaction lasts 24 hours, and corresponds to the phase of release from the ovary.

Fertility: stages of the menstrual cycle - Fertility Center

It involves measuring the growing follicle via a series of scans done during the follicular phase of the menstrual cycle and starts from: Day 9 or 10 of natural or IUI cycle; Day 5 or 6 of IVF cycle and serial scan. It basically tracks the physiological growing of the follicle throughout the follicular phase so that the ovulation can be predicted.

Role of Follicular Study in Menstrual cycle tracking for ...

As the follicles grow they secrete the hormone oestrogen. Oestrogen works to thicken the wall of your uterus in preparation for pregnancy. On day seven of your cycle, the follicles stop growing except for one. This follicle continues to grow and to nourish a maturing egg (oocyte) within.

Ovulation and conception | The Royal Women's Hospital

Ovulation is the release of eggs from the ovaries. In women, this event occurs when the ovarian follicles rupture and release the secondary oocyte ovarian cells. After ovulation, during the luteal phase, the egg will be available to be fertilized by sperm. In addition, the uterine lining is thickened to be able to receive a

fertilized egg. If no conception occurs, the uterine lining as well as blood will be shed during menstruation.

Ovulation - Wikipedia

Rising estrogen levels during the follicular phase trigger your pituitary gland to release luteinizing hormone (LH). This is what starts the process of ovulation. Ovulation is when your ovary...
