The analysis of a buried pipeline is entirely different from plant piping analysis. The unique characteristics of this kind of pipeline require some unique problems involvement like code requirements and techniques in the underground pipeline stress analysis. However, the analysis elements include anchorage force, pipe movements, lateral soil

force, soil friction, and soil pipe interaction.

Pipe Stress Analysis for Underground Piping or Pipeline

Piping stress analysis is a combination of art and science. Stress engineers should have a good understanding of piping layouts, ASME code requirements, and the art of optimization. The parameters like safety of pipe, equipment, nozzle, piping fittings, and piping components are addressed in the pipe stress analysis.
