Carbon Chemistry

Founded by the Lotspeich brothers,

Carbon Chemistry is a leading supplier of materials used in cannabinoid production, purification, and distillation. Through years of experience, we found manufacturers lacked a single, reliable source for acquiring chemicals used to make cannabis oil. We solve the problem by providing a variety of proven, hand-selected products for the industry.

Carbon (from Latin: carbo "coal") is a chemical element with the symbol C and atomic number 6. It is nonmetallic and tetravalent —making four electrons available to form covalent chemical bonds. It belongs to group 14 of the periodic table. Carbon makes up only about 0.025 percent of Earth's crust.

Carbon - Wikipedia

Carbon, chemical element that forms more compounds than all the other elements combined. Carbon is widely distributed in coal and in the compounds that make up petroleum, natural gas, and plant and animal tissue. The carbon cycle is one of the most important of all biological processes.

carbon | Facts, Uses, & Properties | Britannica

The chemistry of carbon is dominated by three factors. 1. Carbon forms unusually strong C-C single bonds, C=C double bonds, and carbon-carbon triple bonds. 2. The electronegativity of carbon (EN = 2.55) is too small to allow carbon to form C 4-ions with most metals and too large for carbon to form C 4+ ions when it reacts with nonmetals. Carbon therefore forms covalent bonds with many other elements.
