Setting Up Lamp Getting Linux

You could think of Setting Up LAMP as four books in one, but it's actually something much more valuable: a single volume that presents the open-source technologies known collectively as LAMP—Linux, Apache, MySQL, and PHP—as tightly dovetailed components of today's most affordable and effective platform for building dynamic web-based applications.

Setting up LAMP: Getting Linux, Apache, MySQL, and PHP ...

sudo apt update. sudo apt install apache2. If this is the first time you're using sudo within this session, you'll be prompted to provide your user's password to confirm you have the right privileges to manage system packages with apt. You'll also be prompted to confirm Apache's installation by pressing Y, then ENTER.

How To Install Linux, Apache, MySQL, PHP (LAMP) stack on ...

sudo apt-get install php5 libapache2-mod-php5. NOTE: Again, depending upon your OS installation, this might require some dependencies to be met. Allow apt-get to pick up those dependencies. When the installation is complete, restart Apache with the command: sudo /etc/init.d/apache2 restart

Easy LAMP Server Installation - Linux.com

Before you do anything else, we recommend that you set up an Apache virtual host where you can store your server's configuration details. Step 4 — Setting Up Virtual Hosts (Recommended) When using the Apache web server, you can use virtual hosts (similar to server blocks in Nginx) to encapsulate configuration details and host more than one domain from a single server.
