Enzymes speed up reactions by lowering the activation energy barrier Enzymes are biological catalysts, and therefore not consumed or altered by the reactions they catalyze. They repeatedly bind substrate, convert, and release product, for as long as substrate molecules are available and thermodynamic conditions are favorable (ΔG is negative; the product/substrate ratio is lower than the equilibrium ratio).

Enzymes | Biomolecules | Learnbiology.net

Enzymes are biological catalysts that speed up the rate of the majority of chemical reactions that occur in the cell. They do this by lowering the activation energy required for the reaction to proceed. Enzymes are essential, the rate of most reactions would be too slow without them and the cell would fail to keep up with the biochemical demands

Enzymes work by lowering the Activation Energy of a reaction. ... The Activation Energy of a reaction is lowered by putting stress on the bonds within a molecule, or by holding molecules close together. Energy, Enzymes, and Catalysis Problem Set - Biology

Enzymes function as organic catalysts. A catalyst is a chemical involved in, but not changed by, a chemical reaction. Many enzymes function by lowering the activation energy of reactions. By bringing the reactants closer together, chemical bonds may be weakened and reactions will proceed faster than without the catalyst.

REACTIONS & ENZYMES

No, enzymes are catalyst of biological reactions meaning they speed up reactions of altering and affecting molecules in our bodies, but it does not have to be breakdown. Digestive enzymes are known to break down molecules but here are some other functions: IN DNA replication they unwind

DNA, or synthesize DNA. (helicase and DNA Polymerase).

Enzymes (video) | Energy and transport | Khan Academy

Enzymes are biological catalysts that increase the rate of chemical reactions inside cells by lowering the activation energy required for the reaction to proceed. In nature, exergonic reactions do not require energy beyond activation energy to proceed, and they release energy. They may proceed

without enzymes, but at a slow rate.

7.1: Energy, Matter, and Enzymes - Biology LibreTexts

Enzymes are biological catalysts for lowering activation energy - they speed up the rate of reactions and allow biological reactions involved in metabolic processes to take place at body temperature (37°C). You may have previously been most familiar with the lock and key model of enzyme action.
