Graphical Method Of Solving Linear Equations In Two Variables. Let the system of pair of linear equations be. $a_1x + b_1y = c_1$ (1) $a_2x + b_2y = c_2$ (2) We know that given two lines in a plane, only one of the following three possibilities can happen -. (i) The two lines will intersect at one point.

Graphical Solutions to Mathematical Problems. Students are required to use linear and quadratic graphs to estimate values of y for given values of x and vice versa. The most common area of use for this skill is when students are required to solve equations graphically. Students are also expected to be able to find approximate solutions of simultaneous equations using a graphical method.

Graphical Solutions to Mathematical Problems | STEM

1. The graphs intersect at one point. The system is consistent and has one solution. Since neither equation is a multiple of the other, they are independent. 2. The graphs are parallel.

The system is inconsistent because there is no solution. Since the equations are not equivalent, they are independent. 3. Equations have the same graph.
