Cellular Manufacturing: One-Piece Flow for Workteams ...

Cellular manufacturing helps reduce waste by reducing defects that result from processing and product changeovers. Since products or components move through a cell one piece at a time, operators can quickly identify and address defects. Autonomation (jidoka) in cellular systems helps prevent waste by signaling when defects occur. Under a conventional batch-and-queue process, it is difficult to identify and respond to defects until the entire batch is produced or numerous pieces are processed.

In the simplest of terms, one-piece flow means that parts are moved through operations from step to step with no work-in-process in between either one piece at a time or a small batch at a time. This system works best in combination with a cellular layout in which all necessary equipment is located within a cell in the sequence in which it is used.

Achieving one-piece flow - Reliable Plant

This grouping is called a cell. These cells are used to improve many factors in a manufacturing setting by allowing one-piece flow to occur. An example of one-piece flow would be in the production of a metallic case part that arrives at the factory from the vendor in separate pieces, requiring assembly. First, the pieces would be moved from storage to the cell, where they would be welded together, then polished, then coated, and finally

packaged.

Cellular manufacturing - Wikipedia

Most commonly used as a manufacturing approach in which equipment and workstations are arranged to facilitate small lot, continuous flow production. In a cell, all operations that are necessary to produce a product or service for a customer are performed in close proximity, often times in a U-shaped layout, thus allowing for quick feedback between operations when problems and other issues arise.
