In biology, a biological life cycle is a series of changes in form that an organism undergoes, returning to the starting state. "The concept is closely related to those of the life history, development and ontogeny, but differs from them in stressing renewal." Transitions of form may involve growth, asexual reproduction, or sexual reproduction. In some organisms, different "generations" of the species succeed each other during the life cycle. For plants and many algae, there are two multicellula

Primary Booklet 2 - Reproduction and Life Cycles - Part 1 One of a series of booklets written to support plant science in the Primary Curriculum.

This topic extends pupils' understanding of the parts of a flower and their functions, with a range of fun activities to reinforce pupil learning.

Primary Booklet 2 - Reproduction and Life Cycles - Part 1

The first adaptation is that the life cycle in all land plants exhibits the alternation of generations, a sporophyte in which the spores are formed and a gametophyte that produces gametes. Second is an apical meristem tissue in roots and shoots. Third is the evolution of a waxy cuticle to resist desiccation (absent from some mosses).
