Grinding fluid also acts as a coolant, and even oil has some heat-transfer capability, but not as much as water-based coolants.

“Material removal is increased by the reduction in specific energy, which allows the stock removal rate to go up without increasing the surface damage to the workpiece,” said Foster.

The use of cutting oil in machining operations can be a risky business. Jed DeJong, grinding application manager for Blaser Swisslube Inc., Goshen, N.Y., said the risk of fire is one of the

reasons that many manufacturers avoid cutting oil—commonly referred to as “neat oil.” But doing so might be shortsighted and hurt the bottom line.
