The bee acts as a detector of environmental pollution in two ways, as it signals either via high mortality rates the presence of toxic molecules, or via the residues in honey, pollen, and larvae...

(PDF) Honey bees as bioindicators of environmental pollution

Bees are under threat and need to be conserved. They are threatened by habitat destruction and killed by environmental pollution, pesticides in particular. In some parts of the world indigenous bee species are threatened by the importation of alien

species which compete for food and dilute their genetic integrity.

Bees for development | Conservation & environment

• Adult honey bees = 292 mg food/day • Based on nectar foraging worker • Represents consumption of nectar • Pollen consumption is insignificant relative to nectar U.S. Environmental Protection Agency 9 • Larvae = 120 mg food/day • Based on 5 day old worker larvae • Represents consumption of honey (converted to nectar equivalent) and pollen
