Given that muscles make movement happen, each muscle will create a certain movement around a joint. For instance the quadriceps muscle group will extend the knee and flex the hip. The tables on the following pages detail the origin, insertion and action of some of the major muscles in the body.

Key Muscle Locations and Movements — PT Direct

Muscle tissue is a soft

tissue that composes muscles in animal bodies, and gives rise to muscles' ability to contract. This is opposed to other components or tissues in muscle such as tendons or perimysium. It is formed during embryonic development through a process known as myogenesis. Muscle tissue consists of elongated cells also called as muscle fibers.
