There are two methods for updating a FreeBSD system: from source or binary updates. Updating from source is the most involved update method, but offers the greatest amount of flexibility. The process involves synchronizing a local copy of the FreeBSD source code with the FreeBSD Subversion servers. Once the local source code is up-to-date, a new version of the kernel and userland can be compiled.

FreeBSD Quickstart Guide for Linux® Users

Users and Basic Account Management. FreeBSD allows multiple users to use the computer at the same time. While only one user can sit in front of the screen and use the keyboard at any one time, any number of users can log in to the system through the network. To use the system, each user should have their own user account. This chapter describes:

FreeBSD is a free and open-source Unix-like operating system
descended from the Berkeley Software Distribution (BSD), which
was based on Research Unix.The first version of FreeBSD was
released in 1993. In 2005, FreeBSD was the most popular open-
source BSD operating system, accounting for more than three-
quarters of all installed simply, permissively licensed BSD
systems.
