History The original QFH was made from 10mm copper tubing only because I had some left over from my caravan renovations. This proved to be false economy, as just the 10mm elbows and tee cost more than all the the material for the 15mm (1/2 inch) job! A Quadrifilar Helix Antenna for 137 MHz

Abstract. Introduction: The quadrifilar helix antenna (QHA) is used widely for terrestrial [1] and space communication systems [2], where it is necessary to generate a circularly polarised cardioid-shaped radiation pattern with a high front-to-back ratio and low cross-polarisation. The radiating structure comprises four helical conductors which are excited in phase quadrature at the feed point, which is usually located at the centre of the top radials.

A helical antenna is an antenna consisting of one or more

conducting wires wound in the form of a helix. Helical antenna - Wikipedia

The Quadrifilar Helical Antenna can provide a greater coverage footprint on Earth than simple linearly polarized monopole antennas or circularly polarized patch antennas. The antennas for this application were comprised of two bifilar loops. Antennas using this approach should be used in a loop configuration to be able to apply the direct current.
